(54) DISPLAY ELEMENT

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a display element which hardly receives the restrictions of a size, design and a shape, etc., and is advantageous to the suppression of cost increase, the suppression of weight increase and the improvement of assembling workability further.

SOLUTION: This display element is provided with substrates 11 and 12 provided with projected edge parts 11a and 12a, conductive films 21 and 22 for which at least the side of a display surface 18 is made transparent, a display layer 3 for performing display and a pair of power feeding parts respectively electrically connected to the respective conductive films 21 and 22. At least one of the power feeding parts is provided with a power feeding film 6 formed of an electric conductive material extended along a direction X1 crossing the direction Y1 which is the projecting direction of the projected edge part 11a and a clip electrode terminal 51 provided with a length shorter than the length in the extension direction of the power feeding film 6.
